

Regular Expression Wizardry

Josiah Mory

@kickinbahr

A regular expression is a pattern
describing a specific string of text

A regular expression "engine" is a piece of software that can process regular expressions, trying to match the pattern to the given string

The syntax and behavior of a particular engine is called a regular expression flavor

3 Things You Do w/ RegEx

Dave Thomas - Pickaxe Book

- ❖ Test - a string to see if it matches your pattern
- ❖ Extract - a string (or part of a string) that matches your pattern
- ❖ Change - a string by replacing parts that match with other text

“Find-and-Replace on Steroids”.- Dan Nguyen

Literal Characters

Most Characters (a-z, A-Z, 0-9, ect...)

Special Characters

12 special or (meta) characters

`\, ^, $, ., |, ?, *, +, (,), [,]`

*If you want to use any of these characters as a literal in a regex, you need to escape them with a backslash

```
gandalf_quote1 = "You shall not pass! -Gandalf"
```

```
the_grey = " The Grey"
```

```
puts gandalf_quote + the_grey
```

```
=> You shall not pass! -Gandalf The Grey
```

gandalf_quote2 = "Yes, yes my dear sir and I do know your name Mr. Bilbo Baggins. And you do know my name, though you don't remember that I belong to it. I am Gandalf, and Gandalf, means me."

gandalf_quote2 = "Yes, yes my dear sir and I do know your name Mr. Bilbo Baggins. And you do know my name, though you don't remember that I belong to it. I am Gandalf #{the_grey}, and Gandalf #{the_grey} means me."

I SUPPOSE YOU THINK THAT WAS TERRIBLY CLEVER.

Lookarounds

- ✧ Lookahead - $?=$
- ✧ Lookbehind - $?<=$
